

1. [10] Vypočítajte súčet radu

1A. $\sum_{n=2}^{\infty} \frac{1-2^n}{3^n}$

$$\sum_{n=2}^{\infty} \frac{1-2^n}{3^n} = \sum_{n=2}^{\infty} \frac{1}{3^n} - \sum_{n=2}^{\infty} \frac{2^n}{3^n} = \frac{1}{3^2} \cdot \frac{1}{1-\frac{1}{3}} - \frac{2^2}{3^2} \cdot \frac{1}{1-\frac{2}{3}} = \frac{1}{9} \cdot \frac{1}{\frac{2}{3}} - \frac{4}{9} \cdot \frac{1}{\frac{1}{3}} = \frac{1}{6} - \frac{4}{3} = -\frac{7}{6}$$

1B. $\sum_{n=1}^{\infty} \frac{1-2^n}{3^n}$

$$\sum_{n=1}^{\infty} \frac{1-2^n}{3^n} = \sum_{n=1}^{\infty} \frac{1}{3^n} - \sum_{n=1}^{\infty} \frac{2^n}{3^n} = \frac{1}{3} \cdot \frac{1}{1-\frac{1}{3}} - \frac{2}{3} \cdot \frac{1}{1-\frac{2}{3}} = \frac{1}{3} \cdot \frac{1}{\frac{2}{3}} - \frac{2}{3} \cdot \frac{1}{\frac{1}{3}} = \frac{1}{2} - 2 = -\frac{3}{2}$$

1C. $\sum_{n=3}^{\infty} \frac{1-2^n}{3^n}$

$$\sum_{n=3}^{\infty} \frac{1-2^n}{3^n} = \sum_{n=3}^{\infty} \frac{1}{3^n} - \sum_{n=3}^{\infty} \frac{2^n}{3^n} = \frac{1}{27} \cdot \frac{1}{1-\frac{1}{3}} - \frac{8}{27} \cdot \frac{1}{1-\frac{2}{3}} = \frac{1}{27} \cdot \frac{1}{\frac{2}{3}} - \frac{8}{27} \cdot \frac{1}{\frac{1}{3}} = \frac{1}{18} - \frac{8}{9} = -\frac{5}{6}$$

Poznámka. Študentom, ktorí namiesto výpočtu súčtu iba ukázali, že rad je konvergentný som dával najviac 1 bod.

2A. Daná je funkcia $f(x) = \ln(4 - x^2)$.

a) [1+2+2] Určte $D(f)$, vypočítajte deriváciu $f'(x)$ a určte $D(f')$,

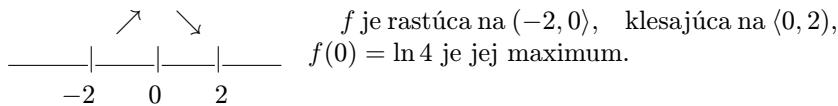

$$4 - x^2 > 0 \iff x^2 < 4 \iff |x| < 2, \quad D(f) = (-2, 2),$$

$$f'(x) = \frac{-2x}{4 - x^2}, \quad D(f') = \{x \in D(f) : \exists f'(x)\} = D(f)$$

Poznámka. Priveľa študentov napísalo $D(f') = R \setminus \{-2, 2\}$. Derivácia funkcie ale nemôže byť definovaná v bodoch, kde nie je definovaná ani samotná funkcia. Keď si to uvedomíte je rozhodnutie kde je $f'(x) \geq 0$ a kde $f'(x) \leq 0$ je veľmi jednoduché. menovateľ $4 - x^2 > 0$, rozhoduje teda znamienko čitateľa.

b) [3] Určte intervale, na ktorých je funkcia $f(x)$ monotónna a napíšte jej extrémy.

$$x \in D(f) \vee f'(x) > 0 \implies -2x > 0, x \in (-2, 0) \quad f'(x) < 0 \implies -2x < 0, x \in (0, 2)$$

Poznámka. Na určenie, kde je maximum netreba druhú deriváciu, keď už poznáte intervale monotónnosti.

c) [2] Určte jej asymptoty.

$$\text{ASS funkcia nemá, } \lim_{x \rightarrow \pm 2} f(x) = \ln 0 = -\infty \implies \text{ABS: } x = -2, x = 2$$

Poznámka. Nestačí napísať ABS sú $x = -2, x = 2$, treba aj počítať limity.

Za hľadanie asymptoty so smernicou v $\pm\infty$ by si v tomto prípade študent zaslúžil strhnúť aspoň 3 body, uvedomte si aký je $D(f)$.

2B. Daná je funkcia $f(x) = \ln(1 - x^2)$.

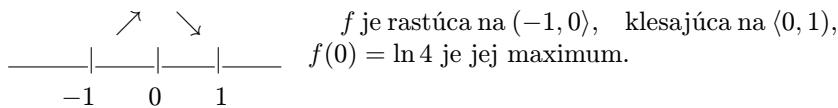

a) [1+2+2] Určte $D(f)$, vypočítajte deriváciu $f'(x)$ a určte $D(f')$,

$$1 - x^2 > 0 \iff x^2 < 1 \iff |x| < 1, \quad D(f) = (-1, 1),$$

$$f'(x) = \frac{-2x}{4 - x^2}, \quad D(f') = \{x \in D(f) : \exists f'(x)\} = D(f)$$

b) [3] Určte intervale, na ktorých je funkcia $f(x)$ monotónna a napíšte jej extrémy.

$$x \in D(f) \vee f'(x) > 0 \implies -2x > 0, x \in (-1, 0) \quad f'(x) < 0 \implies -2x < 0, x \in (0, 1)$$

c) [2] Určte jej asymptoty.

$$\text{ASS funkcia nemá, } \lim_{x \rightarrow \pm 1} f(x) = \ln 0 = -\infty \implies \text{ABS: } x = -1, x = 1$$

2C. Daná je funkcia $f(x) = \ln(9 - x^2)$.

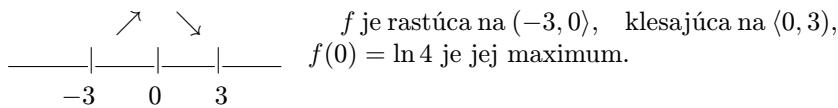

a) [1+2+2] Určte $D(f)$, vypočítajte deriváciu $f'(x)$ a určte $D(f')$,

$$9 - x^2 > 0 \iff x^2 < 9 \iff |x| < 3, \quad D(f) = (-3, 3),$$

$$f'(x) = \frac{-2x}{4 - x^2}, \quad D(f') = \{x \in D(f) : \exists f'(x)\} = D(f)$$

b) [3] Určte intervale, na ktorých je funkcia $f(x)$ monotónna a napíšte jej extrémy.

$$x \in D(f) \vee f'(x) > 0 \implies -2x > 0, x \in (-3, 0) \quad f'(x) < 0 \implies -2x < 0, x \in (0, 3)$$

c) [2] Určte jej asymptoty.

$$\text{ASS funkcia nemá, } \lim_{x \rightarrow \pm 1} f(x) = \ln 0 = -\infty \implies \text{ABS: } x = -3, x = 3$$

3A. Vypočítajte limity

a) [3] $\lim_{x \rightarrow -\infty} \frac{x^5 + x + 1}{x^3 + x + 1} = \lim_{x \rightarrow -\infty} \frac{x^5(1 + \frac{1}{x^4} + \frac{1}{x^5})}{x^3(1 + \frac{1}{x^2} + \frac{1}{x^3})} = \lim_{x \rightarrow -\infty} x^2 \frac{1 + \frac{1}{x^4} + \frac{1}{x^5}}{1 + \frac{1}{x^2} + \frac{1}{x^3}} = \infty$

b) [3] $\lim_{x \rightarrow \pi} \frac{1 - \cos 2x}{\operatorname{tg} x} (\frac{0}{0}) = \lim_{x \rightarrow \pi} \frac{2 \sin 2x}{\frac{1}{\cos^2 x}} = \frac{0}{(-1)^2} = 0$

c) [3] $\lim_{x \rightarrow \infty} x \operatorname{arccotg} x (\infty \cdot 0) = \lim_{x \rightarrow \infty} \frac{\operatorname{arccotg} x}{\frac{1}{x}} = \lim_{x \rightarrow \infty} \frac{-\frac{1}{1+x^2}}{-\frac{1}{x^2}} = \lim_{x \rightarrow \infty} \frac{x^2}{1+x^2} = \lim_{x \rightarrow \infty} \frac{1}{1+\frac{1}{x^2}} = 1$

d) [1] $\lim_{x \rightarrow -2^+} \frac{1}{\ln(4-x^2)} = \frac{1}{-\infty} = 0$

3B.

a) [3] $\lim_{x \rightarrow -\infty} \frac{x^4 + x + 1}{x^3 + x + 1} = \lim_{x \rightarrow -\infty} x \frac{1 + \frac{1}{x^3} + \frac{1}{x^4}}{1 + \frac{1}{x^2} + \frac{1}{x^3}} = -\infty$

b) [3] $\lim_{x \rightarrow -\pi} \frac{1 - \cos 2x}{\operatorname{tg} x} (\frac{0}{0}) = \lim_{x \rightarrow -\pi} \frac{2 \sin 2x}{\frac{1}{\cos^2 x}} = \frac{0}{1} = 0$

c) [3] $\lim_{x \rightarrow \infty} x \operatorname{arccotg} x (\infty \cdot 0) = \lim_{x \rightarrow \infty} \frac{\operatorname{arccotg} x}{\frac{1}{x}} = \lim_{x \rightarrow \infty} \frac{-\frac{1}{1+x^2}}{-\frac{1}{x^2}} = \lim_{x \rightarrow \infty} \frac{x^2}{1+x^2} = 1$

d) [1] $\lim_{x \rightarrow 1^-} \frac{1}{\ln(1-x^2)} = \frac{1}{-\infty} = 0$

3C.

a) [3] $\lim_{x \rightarrow -\infty} \frac{x^5 + x + 1}{x^4 + x + 1} \lim_{x \rightarrow -\infty} \frac{x^5(1 + \frac{1}{x^4} + \frac{1}{x^5})}{x^4(1 + \frac{1}{x^3} + \frac{1}{x^4})} = \lim_{x \rightarrow -\infty} x \frac{1 + \frac{1}{x^4} + \frac{1}{x^5}}{1 + \frac{1}{x^3} + \frac{1}{x^4}} = -\infty$

b) [3] $\lim_{x \rightarrow 3\pi} \frac{1 - \cos 2x}{\operatorname{tg} x} (\frac{0}{0}) = \lim_{x \rightarrow 3\pi} \frac{2 \sin 2x}{\frac{1}{\cos^2 x}} = \frac{0}{(-1)^2} = 0$

c) [3] $\lim_{x \rightarrow \infty} x \operatorname{arccotg} x (\infty \cdot 0) = \lim_{x \rightarrow \infty} \frac{\operatorname{arccotg} x}{\frac{1}{x}} = \lim_{x \rightarrow \infty} \frac{-\frac{1}{1+x^2}}{-\frac{1}{x^2}} = \lim_{x \rightarrow \infty} \frac{x^2}{1+x^2} = 1$

d) [1] $\lim_{x \rightarrow e} \frac{1}{\ln(x^2)} = \frac{1}{\ln e^2} = \frac{1}{2}$

Poznámka. Pomerne veľa z vás počítaľo b) pomocou vzorca $(\sin x)^2 = \frac{1 - \cos 2x}{2}$, ale napísali $\sin x^2 = \frac{1 - \cos 2x}{2}$,

keby som za to strhol body, mnohí by ste mali horšiu známku. Správne a obvyklé by bolo aj $\sin^2 x = \frac{1 - \cos 2x}{2}$.

To čo ste napísali je $\sin x^2 = \sin(x^2) \neq \frac{1 - \cos 2x}{2}$

Poznámka. Riešte sústavy rovníc znamená určiť množinu všetkých jej riešení. Nestačí zistiť, že existuje alebo existuje nekonečne veľa riešení. To píšem pre tých z Vás, ktorým sa zdá, že dostali málo bodov.

4A. Riešte sústavy rovníc

$$\begin{array}{ll} a)[7] & \begin{aligned} 2x + y + z &= 1 \\ 3x + 2y - z &= 2 \\ 4x + y + 7z &= 1 \end{aligned} \\ b)[3] & \begin{aligned} 2x_1 - x_2 &= 1 \\ x_1 + 2x_2 &= 2 \end{aligned} \end{array}$$
